Subject: Managing the(air ! water ! carbon !)

Dear members of the committee : today we face a (OUT OF BALANCE ECOLOGY!) we are a dynamic society with freedom and opportunity for all ! This is good news.
The area of opportunity is on water management ! All our WPCA need to put to better use the processed waters! And we need to build the HABITATS managing the excessive rain from going to waste or allowing to create the right conditions to favor (chronic diseases)to take place . We have to much SALT WATERS ! We suffer droughts or excessive rains in this world ! But we fail to manage it . A water management (strategy)is what we need to create a balance for all the different out of balance areas of this world ! We can turn deserts into living areas with time ! This strategy allow the soils to come alive with life to build the structures necessary to hold the nutrients from polluting our oceans ! Nature love ((harmony))the more we work toward it the more we benefit ! Or we will SUFFER THE CONSEQUENCES IF WE FAIL ! like chronic diseases at all time high around the WORLD . I hope this country will take a positive step in the right direction to turn the RAT RACE just for the money business at all cost to a well managed ecosystem to benefit everyone ! Balance is the way this world need to be ! And we the people are endowed with the intelligence to play the role of care taker . Are we ready ? Sincerely. Mike
